DEVANSH BAJPAI

Kanpur, Uttar Pradesh
devanshbajpai45@gmail.com | +91 6393521681 | LinkedIn | GitHub

I am a Computer Science and Engineering graduate specializing in Artificial Intelligence seeking a professional role in the Data and Artificial Intelligence domain where I can apply my skills in Python, Machine Learning algorithms, Data Visualization, and Statistical Analysis. I am committed to continuous learning and aim to contribute to building scalable, accurate, and intelligent solutions that solve real-world challenges.

EDUCATION

- **Pranveer Singh Institute of Technology, Kanpur** Dec 2022- June 2026
  Bachelor of Technology, Computer Science and Engineering (Artificial Intelligence)
  CGPA-7.23
- **Bright Angels Education Centre, Akbarpur** March 2022
  UP Board 12th – 69%
- **Bright Angels Education Centre, Akbarpur** March 2020
  UP Board 10th – 80.33%

SKILLS

- **Programming Languages:** Python, SQL.
- **Data Science Skills:** Data Analysis, Exploratory Data Analysis (EDA), Data Cleaning & Preparation, Data Visualization.
- **Machine Learning & Deep Learning:** Supervised Learning, Unsupervised Learning, Neural Networks (ANN, RNN, LSTM, GRU), Model Evaluation, Hyperparameter Tuning.
- **Libraries & Frameworks:** Scikit-learn, PyTorch, Tensorflow, Pandas, NumPy, Matplotlib, Seaborn, Flask.
- **Tools & Platforms:** Jupyter Notebook, Git, GitHub.
- **Soft Skills:** Creative Thinking, Effective Communication, Problem Solving.

PROJECTS

Student Performance Analysis:

- Built an end-to-end ML pipeline to predict student performance using demographic and academic data.
- Implemented data ingestion, preprocessing, model training, and evaluation.
- **Tech stack**: Python, Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn.

Customer Churn Prediction:

- Built an ANN model to predict customer churn using bank customer data.
- Applied label and one-hot encoding, feature scaling, and deployed the model using Streamlit.
- **Tech stack**: Python, Keras, Scikit-learn, Streamlit.

Network Security Project:

- Built a phishing website detection model to classify URLs as legitimate or malicious using extracted URL features.
- Implemented data preprocessing, feature extraction, and applied classification algorithms for detection.
- **Tech Stack**: Python, Pandas, Scikit-learn, Matplotlib, Seaborn, Flask.

CERTIFICATIONS

- **Complete Data Science, Machine Learning, DL, NLP Bootcamp Udemy** | Instructor: **Krish Naik**
- **Infosys Certifications**: HTML, CSS, Python.
